

AMENDMENTS TO THE DESCRIPTION

Please insert the following paragraphs immediately after the paragraph present at lines 10 to 11 at page 2 of the original disclosure and ending with the words “features and advantages.” :

Summary

In accordance with one aspect, there is provided a paper dispenser made of a single sheet of pliable material and having a substantially frustopyramidal exterior shape with an opened top and a closed bottom, characterized in that it comprises four exterior walls defining the frustopyramidal shape and four interior walls delimiting a rectangular-prism-shaped paper-receiving compartment, wherein said exterior walls are spaced apart from corresponding ones of said interior walls in order to create a space between them, and further characterized in that at least one of the interior walls has an exterior face having an illustration or marking, and in that at least one of said exterior walls comprises an opening allowing to see therethrough the illustration or marking on the interior wall.

In accordance with another aspect, there is provided a paper dispenser made of a single sheet of pliable material and having a substantially frustopyramidal exterior shape with an opened top and a closed bottom, characterized in that it comprises four exterior walls defining the frustopyramidal shape and four interior walls delimiting a rectangular-prism-shaped paper-receiving compartment, wherein said exterior walls are spaced apart from corresponding ones of said interior walls in order to create a space between them, and further characterized in that at least one of said exterior walls comprises an opening; said single sheet of pliable material having a substantially cross-shaped center portion and four side portions, wherein said cross-shaped center portion comprises a middle section that, once folded,

becomes the bottom of said box, and four adjacent sections, adjacent the middle section, which once folded become the exterior walls, wherein the four side portions are connected to corresponding ones of the four adjacent sections, opposite the middle section, and each comprise a panel which once folded will become a corresponding one of the interior walls; the four side portions including a first pair of opposed ones of the side portions, and a second pair of opposed ones of the side portions, each side portion of the first pair having two opposite lateral sections which interlockingly engage with the other two opposite lateral sections once folded, and a flap which comes into abutment with a corresponding one of the exterior walls once folded; and each side portion of the second pair has a flap which precisely fits between the four inner walls when folded against the bottom of said box.
